

FP+ DEMO BROCHURE

A bespoke academy system built around your real football environment

FP+ gives every academy its own private web workspace for admin control, coach workflow, athlete performance tracking, approvals, schedules, communication, and long-term development structure. The public demo shows the operating model. Your live academy system is then configured around your own people, workflows, and priorities.

WHY ACADEMIES CHOOSE FP+

Our aim is to help academies in Kenya and East Africa move closer to global standards through better systems, better reporting, and better day-to-day structure.

ADMIN SIDE

Admin control and academy operations

Run the academy from one secure control layer instead of scattered files, chats, and approvals.

- **Account provisioning and role control**
Create and manage admins, coaches, athletes, parents, and future scout access inside one permissioned system.
- **Approvals and publishing**
Review coach submissions, session plans, athlete reports, and player-card outputs before anything goes live.
- **Teams, schedules, and announcements**
Control teams, age groups, training plans, notices, and academy structure from one place.
- **Oversight, exports, and records**
Keep communication visible, store operational history, and maintain a clear record for follow-up, safeguarding, and reporting.

COACH SIDE

Coach workflow and player development

Give coaches a working system for planning, tracking, reporting, and communicating around their actual squad duties.

- **Session planning**
Build field and classroom sessions against the coaching cycle and route them for admin approval.
- **Athlete reports**
Generate structured development reports with clear ratings, coaching comments, action points, and realistic measures.
- **Player cards and rankings**
Input test data, generate live player cards, and feed age-group or team leaderboard outputs automatically.
- **Attendance, comments, and broadcasts**
Track registers, submit training or match updates, and send controlled one-way communication to assigned groups.

ATHLETE SIDE

Athlete visibility, motivation, and ownership

Give athletes a clear window into their development so feedback, structure, and accountability stay visible.

- **Live performance card**
View player-card metrics, score outputs, and progression in one consistent performance view.
- **Reports and coach feedback**
Access approved athlete reports, comments, and development actions with clear dates and history.
- **Schedules and session visibility**
See upcoming sessions, coaching-cycle context, and published plans without depending on scattered reminders.
- **Rankings and profile ownership**
Follow team standings, update profile details, and stay connected through the in-system communication layer.

Every academy receives a bespoke FP+ build

- Your own private academy workspace with separate admin, coach, athlete, and parent experiences.
- Custom teams, age groups, locations, permissions, and reporting flows based on how your academy actually operates.
- A tailored mix of player cards, athlete reports, schedules, announcements, rankings, and communication tools.
- A system that can keep evolving as your academy grows, adds staff, or changes development priorities.

What academies gain with FP+

- Cleaner operations and fewer admin gaps
- Better coach accountability and structured reporting
- Clearer athlete communication and motivation
- Consistent records for performance, scheduling, and approvals
- A platform shaped around each academy instead of a fixed generic template
- A stronger path toward professional standards across Kenya and East Africa
